Thank you for inviting me to speak with you today.

I have a couple of give-aways at the end of the session to show appreciation. There is a number on the back of my business card – indicating the prize winners – which I will do at the end.
I would like to take part of my time this afternoon to talk about a project that the Eccles Library has been involved with and then to highlight library services, resources and tools to ensure your success with your information needs. I will be glad to answer any questions you have along the way.

Overview

- Sex and Gender Research Differences project

- Scopus
- Your questions?
Earlier this year, the Eccles Library received funding from the National Library of Medicine and the NIH Office of Research on Women’s Health to develop a campaign to inform our health sciences community about sex and gender differences in research and promote resources for learning more about this topic.

What you may not know about this funded project is that the Department of OB/GYN is one of our six partners. AND, we are requesting your support in disseminating the high-quality information and training resources provided by ORWH that have been reviewed, synthesized and repackaged by the Eccles Library project team.
Before continuing with more information about our project and your participation – I would like to provide some background information; as you may know, the NIH Office of Research on Women’s Health has initiated a strategic plan for women’s health and sex differences research for the decade ahead.

(Moving into the Future with New Dimensions and Strategies for Women’s Health Research: A Vision for 2020 for Women’s Health Research --- see the second bullet in the Research Tools tab in the Resources for Women’s Health Research; links to the complete volume plan and public partnerships.)

The goal of the ORWH strategic plan is to encourage clinical and basic sciences researchers to consider sex and gender differences when developing research questions, designing studies, conducting research and reporting results. As one aspect of this overall strategic plan, the ORWH has funded 9 health sciences libraries to participate in a pilot program for information outreach dissemination in order to promote the NIH-ORWH Women’s Health Resources Web Portal of information and training materials.

  - Abby Adamczyk
- Resources
- Promotion
- Your help is requested!

Our Eccles Library project team, led by Amy Honisett (now transitioning to Abby Adamczyk) has been actively reviewing the ORWH resources and training materials. We have created a Sex and Gender Differences Research Guide that pulls together a lot of material in one place.

We are developing a promotional plan to ensure that our health sciences community is aware of the sex and gender differences research information and training tools. We are presenting at faculty department meetings and other places and requesting your support.

We encourage you to use the tools we have created (and I will show you the Research Guide in a minute), suggest that you could easily use social medial to keep current with information coming out of the ORWH and contact us to improve and/or enhance the tools and resources we are hosting.

Sex and Gender Research Differences Project

- Promoting

Any thoughts about disseminating this information into the education of current and future health professionals? How do we ensure that health professionals make sex and gender differences something they consider as they learn, practice and conduct research?
What’s happening on the Garden Level?

- Opening up space for innovation and collaboration
- Options for getting older journal articles
  - Interlibrary Loans
  - Get It Now
Why Scopus?

- Includes MEDLINE references
- Broader scope
- Citation features
- Value added services

Scopus includes MEDLINE citations and articles from different subject areas including the Life Sciences, Health Sciences, Physical Sciences and Social Sciences and Humanities. There are about 16,000 journal titles indexed. Scopus provides value added services.
We are here to help! Our library team has a broad array of subject expertise and knowledge about the resources and tools.

We provide one-on-one consultations; review and/or subject focused hands-on sessions for the medical students and residents; we have expertise with mobile technologies and do our best within budget constraints to provide the materials and tools needed by our health sciences community.
